South Australia Forecast

Issued at 4:00 pm CST on Monday 14 September 2026
for the period until midnight CST Friday 18 September 2026.

Warning Information

For latest warnings go to www.bom.gov.au, subscribe to RSS feeds, call 1300 659 210* or listen for warnings on relevant TV and radio broadcasts.

Weather Situation

A high pressure ridge will move over northern SA on Monday and a cold front will move over southern coastal districts late Monday and early Tuesday. A high pressure system will then move across waters to the south during the week to be centred over Victoria later Thursday then over eastern NSW later Friday. A low pressure trough over the interior of WA may extend into far western parts of SA at times before weakening late Tuesday.

Forecast for the rest of Monday 14 September

Showers and isolated thunderstorms in the far northwest. Isolated light showers about the southern agricultural area, becoming more frequent about southern coastal districts during the evening. Southwest to southeasterly winds, tending west to northwesterly about southern coastal districts during the afternoon and early evening.

Forecast for Tuesday 15 September

Isolated showers and thunderstorms in the far northwest. Isolated light showers about the southern agricultural area during the morning. Maximum temperatures below average. South to southeasterly winds, fresh about the coast and central and northern inland parts.

Forecast for Wednesday 16 September

Cold at first with patchy frost in parts. Dry and mostly sunny day. Maximum temperatures below average. Southeasterly winds, fresh and gusty in the northeast.

Forecast for Thursday 17 September

Cold at first with patchy fog and frost in parts. Dry and mostly sunny day. Maximum temperatures below average, tending above average in the far southwest. Southeast to northeasterly winds, fresh and gusty in the northeast during the day.

Forecast for Friday 18 September

Cold at first with patchy frost in parts. Dry and mostly sunny day. Maximum temperatures mostly above average. East to northeasterly winds becoming northeast to northwesterly during the afternoon. Cumulative rainfall totals to the end of Friday: generally less than 2 mm about the southern agricultural area, but local falls of 2 to 5 mm are possible about the Mount Lofty Ranges and Lower South East districts. 5 to 15 mm is possible in the far west, but local falls of 15 to 30 mm are possible.

The next routine forecast will be issued at 4:00 am CST Tuesday.
