South Australia Forecast

Issued at 4:00 am CST on Thursday 10 September 2026
for the period until midnight CST Sunday 13 September 2026.

Warning Information

For latest warnings go to www.bom.gov.au, subscribe to RSS feeds, call 1300 659 210* or listen for warnings on relevant TV and radio broadcasts.

Weather Situation

A high pressure system centred south of the Bight extends a ridge across the south of SA. The main high centre will gradually move eastwards to be centred to the east of SA on Friday. A trough over the interior of WA will remain stationary for most of the week and may extend into the far west of SA at times. Another low pressure trough will approach from the west on Saturday and move across SA on Sunday.

Forecast for the rest of Thursday 10 September

Cold at first about central and eastern parts with patchy morning frost. Dry apart from isolated showers and thunderstorms in the far west. Maximum temperatures above average in the far northeast but below average elsewhere. Southeast to northeasterly winds, fresh at times near the coast and in the north.

Forecast for Friday 11 September

Patchy morning fog about eastern districts. Dry apart from isolated showers in the west and isolated thunderstorms in the far west. Maximum temperatures slightly below average about coastal districts but above average further inland. East to northeasterly winds, tending east to southeasterly in the northeast.

Forecast for Saturday 12 September

Dry apart from the chance of a shower or thunderstorm in the far southwest in the evening. Maximum temperatures above average. Northeast to northerly winds, tending east to southeasterly in the northeast.

Forecast for Sunday 13 September

Showers and isolated thunderstorms extending across the south, clearing from the west by early afternoon. Maximum temperatures above average. North to northwesterly winds, shifting southwest to southeasterly from the west.

Cumulative rainfall totals to the end of Sunday: less than 2 mm about the agricultural area, although local falls of 2 to 5 mm are possible with Sunday's change. 5 to 15 mm is likely over areas west of about Ceduna, but local heavier falls of 15 to 30 mm are possible in the west of the North West Pastoral district. Less than 2 mm is likely in the far southeast of the North West Pastoral. Falls of 2 to 5 mm are possible over the remainder of the North West Pastoral and in the far west of the North East Pastoral district.

The next routine forecast will be issued at 4:00 pm CST Thursday.
